

Tying Elasticity

Tips for Tying Elasticity Bracelets

These are the knots recommended by Beadalon for tying the Beadalon Elasticity.

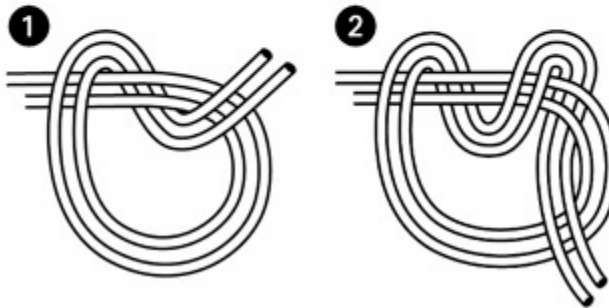

Knotting Instructions:
(Lay pieces of Elasticity parallel)

.....
Figure Eight Knot

..... or

Double Knot

Stretch the cord a little as you tie so there is no slack in the elasticity. After tying the knot, (and we recommend the Double Knot) Before you cut elasticity and add a drop of Glue on the end. Let it dry and then cut closely.

HINT: We like to stuff the knot inside a nearby bead with a larger hole. We plan our bracelet to be sure we have a bead suitable. It hides the knot making the bracelet more attractive.
